INFORMATION TECHNOLOGY SERVICES AND SOLUTION DEVELOPMENT

- Mentor-Protégé Agreement with Pacific Northwest National Labs
- Woman Owned Small Business
- Microsoft Certified Partner / Independent Software Vendor Competency

Since 1986 ProWorks has been a successful software solution provider. ProWorks is a woman-owned small business with a highly skilled team of innovative developers and professionals with over 75 years of combined software development experience. Across the country and around the globe, ProWorks provides a wide range of expertise including project management, database administration, custom web-based application and software development for businesses and government. For both long and short-term projects, our services are a cost-efficient and effective resource for achieving your goals on schedule.

Our strengths include:

- Data Mining/ Analysis/ Visualization
- Database Development
- Artificial Intelligence
- Project Collaboration
- Project Scheduling and Costing
- .NET Applications (C#, C++)
- Web Applications / Web Services
- System Integration
- Workflow Systems
- Distributed Systems

ProWorks Client History

Battelle Memorial Institute – Improving Flight Safety Analysis

ProWorks partnered with Battelle to develop an improved flight monitoring system for NASA called The Morning Report. The Morning Report assists Flight Operations Quality Assurance (FOQA) analysts to efficiently understand immense quantities of flight data in order to identify extreme and atypical flight events.

Battelle Memorial Institute – Enhancing Safety Reporting Systems

Through an ongoing collaboration with Battelle, ProWorks developed the Aviation Safety Reporting System, (ASRS) a successful web based workflow solution that serves NASA and the Federal Aviation Administration. The Patient Safety Reporting System (PSRS) was designed based on ASRS to serve NASA and the Department of Veteran Affairs.

Battelle Memorial Institute – Distributed National FOQA Archives (DNFA)

ProWorks and Battelle continue to develop flight safety analysis systems. DNFA collects flight data from multiple client airlines into an aggregated NASA managed central database. From this database, client airlines and FOQA analysts are able to remotely perform an integrated analysis of the secured flight data from multiple airlines.

Hewlett Packard - Delivering Production Quality Analysis

By delivering a streamlined inkjet quality analysis solution called KEW Analysis to Hewlett Packard, ProWorks improved the production analysis time from weeks to less than a day. The visualization of measurement data also improved the consistency of production quality and enhanced collaboration between inkjet suppliers.

Northwest Geophysical Associates – Providing Quality Development

By utilizing ProWorks' application development expertise, Northwest Geophysical Associates (NGA) is able to accelerate the development for their GM-SYS geologic modeling software. ProWorks works with NGA domain experts to deliver high quality project files on time and within budget for integration into existing commercial software.

ProWorks Client Recommendations

"I can attest to the fact that ProWorks and Mr. Prothero personally, has a long track record of success in its work with Battelle and I would recommend them for any project that requires a combination of broad based technical expertise, development process management, interface with customer and end-users of the product, and overall participation as a member of a multifunctional development team."

Captain Robert E. Lynch
Battelle APMS – DNFA Project Manager

"I have worked with developers from ProWorks Corporation for over 3 years on an ongoing project entitled the Analyst Workbench. This software was custom designed by ProWorks as a cross platform, browser-based report processing tool...They documented requirements, maintained bug lists using a custom designed ProWorks tool, and participated in frequent teleconferences with other members of the Battelle team. They responded rapidly to requests from multiple Battelle staff members and always kept a positive attitude. I would highly recommend the work of ProWorks Corporation for any software development task, you will not be disappointed."

Elisa A. Taube
Principle Research Scientist
Patient Safety Reporting System (PSRS)

"The ProWorks development process is concise and on-time. For our project, they worked from a loosely defined goal and turned it into a product we were able to bring to market in a very reasonable amount of time and dollars."

Craig Borghesani
Terasoft – Founder

"While knowledgeable tech guys are prevalent throughout the industry, it's rare to find a business like [ProWorks] that will take the time to help end-users apply the technology to real-world examples."

Scott Bailey
Miles Lumber Company
