Drawing and flowcharting for applications

Flipper CAD Control is an easy way to add dramatic two-dimensional graphics and flowcharting to applications. You'll have unique ways to organize, present, and show off complex information in an appealing format. An ActiveX component, the control can be used in virtually any development environment that supports this technology.

Features

Customization and Flexibility

Flowcharting and sticky points

Easily create flowcharts and diagrams with the flowcharting features.

Numerous shape types

Everything from rounded rectangles and polygons to pie-slices and freehand is available.

Text and font control

Add labels or notes to your drawing with text shapes. Font control includes everything from the style and size to the orientation and alignment.

Grouping and layering

Organize your drawing with group shapes and create multiple layers with independent properties.

Color and pattern control

Highlight your graphs with full color, mark style, gradient and hatching control.

DXF support

Import DXF files for viewing and editing. Save your drawings as DXF files.

Zooming and scrolling

Zooming and scrolling is easy with the mouse, a button or a scroll bar.

Ease of Use

Intuitive design

Easily build custom applications with an interface designed to be simple and intuitive.

Design-time and run-time drawing

Create and edit shapes programmatically or with the mouse.

Tutorial and searchable help file

Get started quickly by following the tutorial and using the searchable index for the right topics you need

Code examples

See the code behind the examples for a clear understanding of the functions.

Stability and Performance

Royalty free run-time distribution

Distribute your application freely with no royalties or added expense.

Free updates

Continue to gain value from free updates with new features and fixes.

High quality technical support
