

Flipper Graph ASP

Smart. Visual. Solutions.

Graphing Capabilities:

Flipper Graph ASP allows you to create an endless variety of graphs including 2D/3D XY, 2D/3D Pie, Bubble, Spider/Polar, and 3D surfaces. XY graphs can contain any number of lines, scatter points/marks, bars, stacked bars, high-low lines, area plots, and curved lines. In addition, linear and polynomial regression functions and moving average functions can be applied to a line or column of data.

System Requirements

Windows 2000, Windows NT or Windows XP Internet Information Services.

Licensing Options

See website for pricing or call (541) 752 9885.

Interactive graphing and charting for the web

Flipper Graph ASP communicates your data to clients, investors and web users with dramatic, eye-catching graphs. A server side component, Flipper Graph ASP is truly cross platform and cross browser. Simply export your graphs to GIF, transparent GIF, or PNG format and display it on a web page. Graph images can be saved to disk or streamed out directly to the browser. Add impact with tooltips and the ability to drill down with imagemap clicks.

Features

Customization and Flexibility

Multiple graph types and combinations

Graph styles include pie, line, bar, area, spider, bubble, surface, 3D and combinations.

Absolute scale control

Let the graph auto-scale or manually set the minimum, maximum and the increment of any axis scale.

Tooltips and drilldown

Display data with mouse-over pop-ups and explore through data with drilldown graphs.

Mouse interaction and image-mapping

Zoom in and out, scroll the axis, and identify parts of the graph with the mouse.

Image importing

Enhance your graph with your own pictures and logos. Import images as part of the graph or as the background.

Ease of Use

Intuitive design based on 15 years of experience

Over decade of experience is invested in making it easy for you to create graph the way you want to.

Tutorial and searchable help file

Get started quickly by following the tutorial and using the searchable index for the right topics you need

Numerous examples

View the code behind examples for multiple graph types and functionality.

Date/Time data support

Control your scale and increments according to everything from seconds to years.

Data connectivity

Easily tie your graph to a database through ADO to dynamically generate graphs.

Stability and Performance

Award winning architecture

Based on ProWorks own technology that has received awards from Advisor Media.

Image caching

Boost your performance with intelligent, automatic, behind the scenes image caching.

Binary image streaming

Stream your images directly to the browser without any saving to the server.

Superior time to last byte and requests per second

The high performance graphing engine outperforms similar graphing tools.

High quality technical support
